

ONETICKET

Future of Seamless Urban Mobility

Problem Track: Solving the Fragmentation Gap in Indian Urban Transit Through Unified Digital Infrastructure.

The Fragmentation Problem

Urban transportation in India is highly fragmented. Users juggle disconnected operators across multiple platforms for single journeys.

- ✗ Multiple payment systems & ticketing applications
- ✗ Total lack of consolidated multi-modal route planning
- ✗ High physical overhead and waiting queues for individual tickets

Transit Booking Delay Comparison

Traditional Multi-App Wait time 85 mins

One Ticket Unified System 30 mins

Saves up to 60% of administrative and transfer waiting delays.

Proposed Features & Workflow

1. Select & Recommend

Enter your source and destination. Our smart engine processes dynamic schedules to recommend optimal routes.

2. Unified Pass

Generates a singular QR-based ticket validating boarding across multi-modal metros, buses, and rail connections.

3. Smart Checkout

Aggregates fare structures, tracks environmental carbon offsets, and integrates direct payment splits instantly.

Dynamic QR & Settlement

Impact & Scalability

Unified Ledger Interface:

Scales cleanly using open API frameworks to integrate national bus networks, metro rail, and train operators in Indian smart cities.

Dynamic Routings:

Supports live telemetry and schedules to optimize Connecting commuter transfers with zero overhead waiting.

Green Sustainability:

Intelligently tracks user CO2 points offsets, reducing private car density and encouraging green transit habits.

Bridging the Fragmentation Gap

One Ticket establishes a unified, sustainable, and consumer-centric infrastructure loop to solve travel fragmentation across Indian transit networks.
